

Rendering Guidelines

The design teams may choose to do their renderings digitally or use other forms of media (i.e. watercolor on watercolor paper, pastel or chalk on artist paper, etc.), but they must follow the following guidelines:

- The Scene Design Rendering must be from the front perspective and at least be 6"x8" in actual size.
- The Costume Design Rendering must provide a front and back rendering of the costume design and the bodies must at least be 5"x2" in size.
- The Hair/Make-Up Design Rendering must provide a full front and profile view of the design and the heads must be at least 4"x3" in size.
- The Property Design Rendering should be from a view that best presents the prop and should be at least 6"x8".

The renderings can be digitally resized after taking a picture to fit on slides.
